

PENNYWISE APPLICATION FRAMEWORK

INSTALLATION GUIDE

REQUIREMENTS:

You need Think Project Manager.
Some Knowledge of C.
Some Knowledge of Macintosh Programming.

PACKING LIST:

This package should come with the following parts.

PW Framework—Installation [A Document]
PW Framework—Quickstart [A Document]
PW Framework—User Guide [A Document]
PennyWise Application Framework [A Folder]
PennyWise Libraries [A Folder]
PennyWise Includes [A Folder]
PennyView [A Folder]

INSTALLATION:

Put the Folders *PennyWise Libraries* and *PennyWise Includes* in the same folder as *Think Project Manager*.

Put the Folder *PennyWise Application Framework* in the folder titled (*Project Models*) It will be in the same folder as *Think Project Manager*.

Put the Folder *PennyView* in wherever you keep your project folders.

The **PennyWise Application Framework** is now fully installed. If *Think Project Manager* is already running you should quit and restart *Think Project Manager* .

Your All Set!

NOTE: If you are using version 6 of THINK C, C++ you will have to build a new project file for the (*Project Model*) folder. It should be the same name as the project file that is currently in the *PennyWise Application Framework* folder (@1.π).
