### For Coders:

#### Just Browsing...

BBEdit's integrated disk browser provides you with a quick and easy means of navigating any mounted volume. It's the ideal tool for exploring developer and E.T.O. CDs. BBEdition also has the unique ability to open multiple THINK or CodeWarrior project documents, either for browsing or searching.

#### Can't Find It? Just Ask.

At the heart of BBEdition's editing ability is a powerful engine for searching text, either literally or with UNIX™-style "grep" patterns. This search engine is coupled to multi-file directory scanning, and the ability to search currently open windows, previously searched files, or project documents (even if your development environment isn't running). The new "Quick - Search" capability gives interactive searching as you type. So, even if you don't know what you're looking for, BBEdition can find it.

#### Coding Machine.

All of this great capability would be wasted if you couldn't use BBEdition to write code. That's why we've incorporated awareness of Projector, direct support for ToolServer, and seamless integration as an external editor for use with THINK C/Symantec C++ (version 6.0 and later), as well as support for control of Metrowerks CodeWarrior (version 1.2 and later).

#### Up to date and on the edge.

In addition to its renowned editing abilities, BBEdition supports the latest system software technologies: Apple Guide, AppleScript, Macintosh Drag and Drop, PowerTalk, PowerPC acceleration, and Quickdraw GX printing. There are goodies to make your life easier: "soft" text wrapping, automatic linefeed translation, parenthesis balancing, auto-indent, and more. You can also extend BBEdition with plug-in code modules. (We provide information and examples to help.)

### For Netters:

#### Let's Go Surfing.

BBEdit 3.5 has features for the Internet information provider as well as the net surfer:

- Supports the Internet Config system to manage interaction with internet tools such as Web browsers and FTP clients.
- Native PowerPC™ code to speed editing, searching and transformation of text files.
- HTML tools (included) speed the composition of home pages and other WWW content.
- Supports Macintosh Drag and Drop technology for editing and other common tasks.
- Automatic "soft" text wrapping.
- Supports AOCE standard mail package for reading, sending and composition of PowerTalk mail.
- Unique "Find Differences" can find differences between folders and projects, as well as files.
- Scriptable via any OSA compatible scripting language (Including AppleScript® and Frontier™ 3.0)
- Powerful multi-file search and replace.

#### We Didn't Stop There.

We packed value into the entire BBEdition package with great features, including: all new electronic documentation with interactive browser, so the information you need is always at your fingertips; tools from Bare Bones Software's freeware collection, contributed BBEdition extensions, and the BBEdition Extension Developer's Kit, so you can brew your own tools.

#### Check it out! Free Stuff!

In addition to the goodies from us, you also get the latest in updates, demos and information from these other industry leaders: Aladdin Systems, Language Systems, MacTech Magazine, Main Event Software, Mathemæsthetics, MindVision Software, Onyx Technology, Symantec and more...

### What do the Critics Think?

"The speed of BBEdition on Power Macs is very impressive. Large files open very quickly, and search and replace operations, particularly multi-file searching, really fly." Tom Emerson, Software Engineer, Symantec Corporation

"Find Differences has proven itself invaluable. I'm able to quickly compare two sets of source files and integrate the differences. Until BBEdition came along, it was a real chore." Leonard Rosenthol, Director of Advanced Technology, Aladdin Systems

## BBEdit. It doesn't suck.
