

Conditions of Use

This software is copyright © 1994 by Analog Digital Instruments Ltd (ADI). ADI grants you the non-exclusive right to use it, duplicate it, and transfer it from one computer to another, provided that such use is solely for the purpose of evaluating its behaviour. You may not modify, disassemble, or translate the software without the consent of ADI.

No warranty, either express or implied, is made with respect to this software's performance or fitness for purpose. The purchaser relies on the software and the results obtained from it solely at his or her own risk.

UpdateMaker 2 is derived from UpdateMaker 1, which is distributed as shareware. UpdateMaker 2 is not shareware but a fully supported commercial application.

ADInstruments

ADInstruments are the manufacturers of MacLab®, a scientific data recording and analysis system for the Apple Macintosh series. MacLab® comes in two, four and eight-channel forms, with Scope software that emulates a two-channel digital oscilloscope and Chart software to emulate an eight-channel chart recorder. Other packages include the Peaks chromatography workstation and the ElectroLab electrochemistry system. Specialized front-end amplifier modules are also available, such as the Bio Amplifier for human measurement applications and the Bridge Amplifier for force transducers. All MacLab software shares a consistent user interface and closely adheres to the Macintosh human interface standards.

My particular thanks to Malcolm Bowers, John Gee, Michael Macknight, and Werner Uhrig for their encouragement and assistance with UpdateMaker.
