

- C Flow

Abstracts C function calls and declarations from a C source file and produces a listing of the program's calling hierarchy. This utility will operate on any file which ends in the suffix ".c". It will generate a new file with the original file name plus the suffix ".flw" which contains a sequential indented list of all functions called from each function declaration.

It is a useful utility for understanding the overall flow and calling structure of a program, particularly one that has insufficient or no documentation or commenting.
