

## **“Copy”:**

This Edit Menu item copies the splat statistics. If you have splats in the draw window, and select “Copy” from the Edit Menu, and paste to the Scrapbook, you will see, as you do so, that a set of points and lines are being drawn, rather than a “PICT” image. This is a great feature! If you were to paste into a draw program, or 3D rendering program, the point array would be pasted in, as well. It’s a polygon, but you must have the CPU and RAM “horsepower” if you use many points.

If you want a straight “PICT” copy, use a screen capture.
