

## ”MultiSplat”:

This menu item brings up a dialog with edit-text fields for setting up values for a series of splats to be drawn. It only does frames.

Default values variations are:

**Radius 1** from 120 to 55 pixels.

**Radius 2** from 40 to 80 pixels.

Theta’s origin from 0° to 24.00 degrees.

Through 30 **Divisions**, while taking 12 iterations.

If the Okay button is clicked, it draws the series and adds the points to the Splat Statistics. It’s best to draw this way after clearing splats.
