TransSkel 3.05 — Release Notes

This document is an adjunct to the TransSkel Programmer's Manual. It lists changes and additions specific to release 3.05. If you have only programmed with pre-3.0 releases of TransSkel, be sure to read the earlier 3.XX release notes as well.

- `DoClose()` **now saves and restores the port because** `SkelClose()` **(which calls** `DoClose()`**) makes it possible to close windows to which the port isn't currently set.**

- `SkelGetSuspend()` **and** `SkelSetSuspend()` **were renamed to** `SkelGetSuspendResume()` **and** `SkelSetSuspendResume()`**. The** `SkelSuspendProcPtr` **type was renamed to** `SkelSuspendResumeProcPtr`**. Demonstration applications affected by these changes were updated, as was the Windows section of the manual.**

- `SkelGetWindTitleHeight()` **is a new function that returns the height of a window's title bar in script-system independent fashion.**
