TransSkel 3.08 — Release Notes

This document is an adjunct to the TransSkel Programmer's Manual. It lists changes and additions specific to release 3.08. If you have only programmed with pre-3.0 releases of TransSkel, be sure to read the earlier 3.XX release notes as well.

- **New core function `SkelGetCurrentEvent()`, which returns a pointer to the last event seen by `SkelRouteEvent()`.**

- **Added convenience routine `SkelSetDlogType()` back in. Turns out it's useful after all (e.g., for setting the `itemDisable` bit in a dialog item's type value).**

- **Simplified `SkelEventLoop()` a bit.**

- **Fixed bug in *MultiSkel.h* — forgot to change an instance of `Integer` to `short`.**

- **Minor cosmetic changes to demonstration applications, mostly relating to dialog and alert positioning.**
