

Snippets 2.4

Snippets was written to provide a quick reference to your favorite functions. It uses the same display and search engine used by 'C Reference Card'. It's a text viewer only so you don't have to worry about accidentally over-writing your polished routines. Snippets comes pre-loaded with the Argus Function Libraries (version 2.1), but you can add to or modify Snippets using any resource editor.

Best of all, it's free!

Although you can feel free to use this application as you wish, there is no expressed or implied warranty as to the performance of the software.
