

DLOG Manager version 1.02

DLOG Manager is a program that can help you in defining a new DLOG via a Resedit Template. The DLOG gives you standard procedure to manage several types that cannot handle easily with the standard Dialog Manager.

DLOG manager can manage these items:

- Style Edit Field whose appearance can be modified during

running.

- Style Edit Field with vertical and horizontal scrolls.
- Static Style Field that can be initialized with 'TEXT' and 'styl'

items.

- List Field that can be edited during run time.
- Button fields that can be associated with any of the input fields.

- Multi-levels popups.
- Command keys that can be mapped to any push button.

This user manual describe you how the library can be used to create a running example.

For using DLOG manager you need:

- ResEdit 2.1 or greater to insert your 'EdF2' DLOG descriptor.
 - MPW 3.2 or greater with C++ or THINK C 7.04.
