

EVALUATION Edition

17 Feb 1994

Thank-you for downloading the GCP++ Evaluation Edition. It is distributed to potential customers to provide a GCP++ "test-drive" before purchase of the GCP++ TCP/IP SDK for Windows, VB Custom Controls, or VT-220 emulator. The Evaluation Edition is licensed to you as an evaluation environment, and may be freely distributed in totality. Applications built with this Evaluation Kit may not be distributed without purchase of a standard license from Dart Communications.

This Evaluation Edition includes the complete GCP++ TCP/IP SDK for Windows, sans development license and Windows Sockets SDK support. Since the run-time license is not included, the package provides you with "nuisance screens" to remind you that this is only an evaluation tool..

The **Visual Basic Customs Controls** includes VBX files that implement a single protocol each: TCP, UDP, TELNET, TFTP, and VT-220 emulation. They provide "easy to use" TCP/IP access through the use of familiar VB properties and events (NO DLL calls are necessary!). Each VB Custom Control distribution license allows you to build TCP/IP applications that you may freely distribute with GCP runtime support (no royalties).

The **C/C++/WINSOCK Edition** provides you with the GCP_API.DLL, allowing you to build custom TCP/IP applications using the GCP Server. In addition to GCP Server support, a complete WINSOCK development environment is provided: winsock.h, winsock.lib, sample C++ classes for TCP and UDP, the CWINSOCK C++ library definition with code written using MFC, development tips, frequently asked questions, the Windows Sockets Specification, etc. The WINSOCK support is suitable for development of either 16 or 32-bit applications.

The retail **VT-220 for Workgroups** application is not included, but the prototype is. Please test-drive VT220.EXE to evaluate our VT-220 custom control. Special note for VB developers: **The VT-220 custom control may be purchased and then distributed royalty-free!** This is a very cost-effective solution when compared to licensing found elsewhere!

The **GCP++ TCP/IP SDK for Windows** licenses you to use the GCP++ libraries and custom controls, GCP.LIC and header files on a single workstation. Free membership in the "GCP++ Developers Forum" is provided...this is a mailing list maintained at GENISYS that provides a forum for GCP users to get expert advice and share technical and marketing information with other members.

Dart Communications also offers software maintenance for interested parties. Consulting services are also available.
