

## **Lot:** Scene Dimensions

Start by defining your lot. The steps in the **Site** phase will help you do this.

- First, determine how large to make your landscape design.
- Set the dimensions ***at least 10% larger*** than your lot so that it doesn't end abruptly in the 3D scene.
- To change the backdrop and ground cover for the 3D scene, click the appropriate **Change 3D** button, *right*, or choose Edit on the Menu Bar and select Options.
