Gardens: Change Bed Plants

To change some of the plant clusters in the bed:

Select the cluster you want to change.

- Use the Ungroup command found in the Edit menu.

- Once the plants are ungrouped, change or delete them one at a time.

Note: The components of the cluster will no longer act as a group, so be sure you are satisfied with the location before you ungroup them.

To regroup them:

- Select the Grouping icon, then pull your cursor across the plants.

- Use the Plant Finder to add specific plants to Your Object Bar so you can place them in your design.

See **<<GUIDE planting_techniques>> Planting Techniques <<END>>** **for more ideas.**
