ShowBasic Demonstration

This sample demonstrates interaction between ShowBasic and some "external" Windows application. In this particular case "external" application is WinHelp.

When you click "Turn tooltips on" WinHelp engine starts the ShowBasic script which implements so called "tooltips" in this WinHelp instance. Try it by moving the mouse cursor over the buttons which are located below the menu.

Turn tooltips on

Turn tooltips off

Attention:
This example relies on the US version of WinHelp which has the following buttons:
Contents   Search   Back   History   <<   >>
If you are running some international version of WinHelp and text in buttons differs, the "tooltips" will not work.
