NAME BLANK - Blank the screen.

SYNTAX

blank

USAGE

Blank can be used to blank to screen. With servers this
saves the screen phosphor from overburning. There is a
similar program BLANKER, which can automatically blank the
screen. BLANK must be run separately to blank the screen.
However BLANKER requires quite a few threads. It is more
economical to have a separate tool for blanking the screen
in situations, where there is a shortage of memory. You can
set the screen blanking as a program to some of the PMSHELL
groups.
