Radius FPD System
Version 2.5
==================== June 14, 1988 ====================

To install the Radius System Software,

• Drag the file 'FPD System' into the System Folder

• Restart your computer

'FPD System' is an INIT file that installs during startup, ensuring compatibility with Apple's latest System release.

All previous versions of Radius Display Software, including Radius Update, should be taken out of your System Folder.

If you also have a Radius Accelerator, you should have the Radius Accelerator file (version 2.5 or higher and dated June 7, 1988 or later). If you need the Accelerator file, contact your dealer or Radius Customer Support at (408) 434–1010.

As with any System Software changes, there is a possibility of incompatibility with uncommon or newly released applications that escape our testing procedures. If you experience problems, please follow the Troubleshooting guidelines described in your manual.

A special note for users of Apple System release 6.0: the CloseView utility provided by Apple with release 6.0 is not compatible with your FPD. It will cause no harm in your System Folder, but it will not be active.

Please return your registration card (found in your manual) so we can provide you with product updates. We hope you enjoy your Radius Display!

The Radius FPD Team
