

Wordtrix for Windows Installation

The shareware version of Wordtrix requires about 2 megabytes of free disk space for a successful installation. The setup program will ask if you want the program added to the Program Manager groups. If you click on "Yes", then a program group called Tea Time Software will be created, and the Wordtrix icon will be inside it. To start Wordtrix, just double-click on the icon.

Your PC must be equipped with a sound card to hear the sounds and spoken words in Wordtrix. If your PC does not have a sound card, the games will run fine, but Wordtrix will be silent. Note that the shareware version of Wordtrix has sound files for only the first level (initial consonants). This was done to reduce the size of the shareware package for those of you who download shareware from bulletin boards or online services like CompuServe or America Online.
