SmartCat Plus BookManager* <u>Demonstration</u> Extension

Description

The SmartCat Plus Bookmanager demonstration extension is designed to enable SmartCat Plus to determine those BookManager books that are contained in a BookManager Bookshelf (.BKS) file, and to also determine the publication numbers and titles of those books, and the title of the bookshelf. The book files (.BOO) are returned as "internal files" of the bookshelf, and the publication numbers and titles as file comments. BookManager is the publication vehicle used by IBM to distribute softcopy versions of manuals, usually on CD-ROM. In this **demonstration version** of the DLL the resultant catalog will not be saveable.

Manual Installation

To perform a manual installation take the following steps:-

Check to see that the DLL, which is called **SCBKSDEM.DLL,** is in the same directory as SmartCat. If it is not then copy it there.

Edit your **SMARTCAT.INI** file and locate the [Extensions] section, and add the line

      .BKS=SCBKSDEM

(note the dot **.** at the start, it is required), then save your **SMARTCAT.INI** file.
