K.Fogel[74646,2157]   # Code Breaker   **M.Kuhnkey[74250,1501]**

Your task is to discover the secret <u>code</u> created by the computer.

💡 Use the mouse to point and click on a colored button (on the right).

💡 Point and click on a square of the gameboard to place your color. Start from the bottom row, after each guess you advance to the next row.

💡 You may change your selections at any time.

💡 Click the "Did I Get It Right" Button to See.....

💡 The computer will declare you the winner or provide clues to assist you in uncovering the code.

⬣ Right Color, Wrong Position.

⬡ Right Color, Right Position.

😫 The clues only indicate the presence of a correct color and position. You are not told

which position or color is correct!

The code is made up of 4 out of 8 possible colors.
Colors may, or may not repeat.

The "squished bug" identifies the color currently selected

Click on the "Colored Spot" to Select
Watch the "Squished Bug" jump to the Selected Color

Simple Concept...Difficult to Understand!
If "Red" is one of the colors in the "code" the position must also be identified.
However...If "Red" is placed in all the boxes: One will be correct in color and position
while three will be correct only in color.

Put "color selections" for each round here..

Click this button after color selections have been made.

The Secret Code is kept Here!
