Shows help

Choice of screen saver what will run before request of username and password.

Selecting, set up of properties and preview of screen savers what can be integrated with Screen Guard.

Press this button for preview of selected screen saver.

Press this button for setting up of properties of selected screen saver.

Setup of Screen Guard

In this window you can specify what screen saver will be run first, when you lock your desktop. The current screen saver you can see in monitor picture. If you selected none of available screen savers, Screen Guard will use internal function for hiding desktop. You can set up properties of current screen saver by pressing "**Setting**" button and make full screen preview of it by using "**Preview**" button if screen saver is not available for preview in monitor picture.

Also you can call *Access Denied Administration* for management of users/passwords and viewing of log events. Use "**Access Denied security's controls**" button for it. Before you will enter to management area, you need to enter admin's password.

Calls Access Denied Administration
