What is shareware?

SHAREWARE means that you can try software before buying it.

I allow you to use Sub Mar for a 21 day evaluation period; if you continue to use it after the trial period because you like it (sure!) and because it suits your needs then you are requested to **register** otherwise you must remove it from your hard disk and do not use it anymore.

SHAREWARE concept is good for every one because more developpers are encouraged to make more programs and you can try and buy programs you need for only a few money... so support me and the *SHAREWARE* concept.

Sub Mar is not crippled or uncomplete, only display busy messages so enjoy it!

You can share Sub Mar freely and copy it with all your friends as long as you do not modify it and keep all the provided files.

Why registration?

To register for Sub Mar only costs US$10 (50FF).

Send in the registration form (print SubMar.txt) and a check in French Francs drawn on a French bank or alternatively you can use international postal money orders in US dollars or another currency to:

> LEROUX Franck
> 24 Rue Thieullent
> 76310 SAINTE ADRESSE
> FRANCE

You will receive a registration number in order to:
- Avoid the shareware warning!
- Be in your right to use as free upgrade future versions of Sub Mar.
- Have a free technical support by mail or e-mail at: clicsoft@chez.com.
- Support *SHAREWARE* concept and protect this diffusion mode good for all.

It's also a way for me to evaluate how people respond to shareware system, if I have to go on making *Nice Designed and High Quality Software* (!) for a very reduced price and to know how Sub Mar is famous all over the world ;-)

What is needed to run?

You will need the following files that are in the RUNTIME directory of your install disk:

- VBRUN300.DLL   MicroSoft Visual Basic 3.00 Dynamic Link Librairy

- MCI.VBX
- THREED.VBX   MicroSoft Visual Basic 3.00 Controls

How to install?

This topic will assume you have already read the section <u>What is needed to run?</u>.

If you have the installation software, just run SetupWit then follow the instructions.

Else if you get Sub Mar from BBS, WEB or other, copy all the files of the SubMar directory of your support disk on your hard disk in the directory you want (C:\SubMar for example) then in Program Manager, go to File/New and type C:\SubMar\SubMar.exe, where C:\SubMar is the directory you install Sub Mar.

If you have VBRUN300.DLL and THREED.VBX in your WINDOWS\SYSTEM directory, you do not need to copy them but if not you should copy them from the RUNTIME directory of your support disk to your WINDOWS\SYSTEM directory on your hard disk (where you will be able to share them with other programs written in Visual Basic) or to the directory you install Sub Mar.
