Contents & General Info

WHAT IS THIS FILE?

The Delphi VCS Component Essential Reference is just help file that is built from a text file I found invaluable. It provides simple, clear looks at the different classes in Delphi, and the members of each one.

There is no contents page to this help file in the traditional sense. There are more than 220 topics and the Word Macro I am using   was whipped up in 15 minutes and won't do the contents anyway :)

I will apologize now that not every class HAS a "Derived From" entry. About 15 out of 220+ were missing that text when I got the file. You can spot them in the "Search" window. They are under the "-" entry. But in most cases it is obvious anyway.

Have fun!

Oh, BTW, if anyone uses the included .RTF file to make a better version, do me a favor and send it along to me!

P.S. All this information came from a file called OBJREF.ZIP. The readme for that file says that it was posted by :

<div align="center">

Tim Roberts, new Delphi addict
75310,2475
timr@iia.com

</div>

Thanks Tim and all the folks who gave us Delphi.

P.P.S. I claim no copyrights here, do whatever you want but I would be grateful if you could leave Tim and I in the file. Any trademarks belong to their respective companies.

The Word 6.0 Simple Format Help Generation Macro

```
' Kenneth Jamieson , 1995
' soulhuntre@msn.com
'
' Use it as you will, it is incredibly simple and I release
' it into the public domain.
'
' This macro is VERY simple. You must have your file set up with
' each desired topic on a new page (Hard Page Break).
' On each page, the top line will be parsed as shown below.
'
'"EDBEngineError            (Unit DB) Derived from EDatabaseError"
'
' The whole line becomes the topic title.
' EDBEngineError -> Topic name
' EDBEngineError, Unit DB, EDatabaseError become keywords
'
' In addition, a Browse sequence number is started at 1 and added
' to each topic.
'
' IMPORTANT NOTE! BEcause of the syntax of this macro, you MUST have
' a HARD page break before EVERY topic, includeing the >>FIRST<<!
'
Dim Shared browseid

TTabOrderProperty   **(Unit DsgnIntf) Derived from TIntegerProperty**

```
Properties              Methods                 Events
------------------      ------------------      ------------------
  GetAttributes
```

TTable   (Unit DBTables) Derived from TDBDataSet

```
Properties              Methods                 Events
-------------------     -------------------     -------------------
  BatchMove               AddIndex
* Exclusive               ApplyRange
  FindKey                 CancelRange
  GotoKey                 CreateTable
  IndexDefs               DeleteIndex
  IndexFieldCount         DeleteTable
* IndexFieldNames         EditKey
  IndexFields             EditRangeEnd
* IndexName               EditRangeStart
  KeyExclusive            EmptyTable
  KeyFieldCount           FindNearest
* MasterFields            GetIndexNames
* MasterSource            GotoCurrent
* ReadOnly                GotoNearest
* TableName               LockTable
* TableType               RenameTable
* UpdateMode              SetKey
                          SetRange
                          SetRangeEnd
                          SetRangeStart
                          UnlockTable
```

TTableDataLink   **(Unit DBTables) Derived from TDataLink**

```
Properties          Methods             Events
-------------------   -------------------   -------------------
```

TTimeField   **(Unit DBTables) Derived from TDateTimeField**

```
Properties              Methods                 Events
-------------------     -------------------     -------------------
```

TTimer   (Unit ExtCtrls) Derived from TComponent

```
Properties              Methods                 Events
-------------------     -------------------     -------------------
* Enabled                                       * OnTimer
* Interval
```

TVarBytesField   (Unit DBTables) Derived from TField

```
Properties              Methods                 Events
------------------      ------------------      ------------------
* Size
```

TVirtualStream   (Unit IStreams) Derived from TStream

```
Properties              Methods                 Events
-------------------     -------------------     -------------------
  GetModifyTime
  Read
  Seek
  Write
```

TWinControl   (Unit Controls) Derived from TControl

```
Properties              Methods                 Events
-------------------     -------------------     -------------------
  Brush                   Broadcast
  CanFocus                DisableAlign
  ContainsControl         EnableAlign
  ControlAtPos            GetTabOrderList
  ControlCount            HandleNeeded
  Controls                InsertControl
  Focused                 Invalidate
  Handle                  Realign
  HandleAllocated         RemoveControl
* HelpContext             Repaint
  Showing                 ScaleBy
  TabOrder                ScrollBy
  TabStop                 SetBounds
                          SetFocus
                          Update
                          UpdateControlState
```

TWinOleHelper   (Unit Forms) Derived from TObject

```
Properties            Methods               Events
--------------------  --------------------  --------------------
  OnSetFocus            OnActivate
                        OnClose
                        OnFormMouseDown
                        OnParentNotify
                        OnResize
                        OnSetName
                        OnShowModal
```

TWordField   **(Unit DBTables) Derived from TIntegerField**

Properties   Methods   Events
------------------   ------------------   ------------------
