

## Unit PrintObj v1.0

(c) Copyright 1995, Eminent Domain Software and Ed Salgado

PrintObj allows Delphi developers to programmatically set the various properties of the current printer.

### **Included in PrintSet.ZIP**

PRINTOBJ.PAS	Main Unit
PRINTOBJ.WRI	This file

### **Using PrintObj**

To use PrintObj add the unit to your *uses* clause. Then simply Initialize the PrintSet variable (one has been declared for you), set the desired printer property(ies) and then Destroy. Ex:

```
procedure TForm1.Print1Click (Sender: TComponent);
begin
  {this is all you add}
  PrintSet := TPrintSet.Create;
  PrintSet.PaperSize := dmPaper_Legal;
  PrintSet.Copies := 5;
  PrintSet.Free;
  {to here}

  if PrintDialog1.Execute then ...
    {changes will be reflected in PrintDialog and PrinterSetupDialog}
end; { TForm1.Print1Click }
```

### **Properties available for setting**

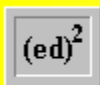

Orientation  
PaperSize  
PaperLength  
PaperWidth  
Scale  
Copies  
Bin  
PrintQuality  
Color  
Duplex

See file WinTypes.PAS for the various settings for these properties. Note that these changes are for the current session only.

Support for this unit is available from Eminent Domain Software c/o Ed Salgado. You can contact me at:

CIS 70600, 3451  
or  
on the Internet [eesalgad@icsi.net](mailto:eesalgad@icsi.net)

Other forms of support are currently not available.
