

Give your **Delphi** and **C++Builder** applications **Windows Explorer functionality** with the Shell Control Pack. Simply place four components on a form set two properties and you have a working Explorer! These powerful shell components include tree view, list view and combo box. Full access is available to drag and drop (into, out of and within your application), context menus including "Send To", renaming/deleting, copy/paste, namespace extensions and much more.

Add features to any application with the two-way splitter, image/indent combo box and enhanced panels. Enhanced **list view** and **tree view** controls support **different fonts, colors** and context menus **for individual items**.

Internationalisation is fully supported, with **translations** provided for **16 languages** - Czech, Danish, Dutch, English, Finnish, French, German, Hungarian, Italian, Japanese, Norwegian, Polish, Portuguese (Brazil), Russian, Spanish and Swedish.

Every application can benefit by replacing the limited and inflexible Windows **common file dialogs**. Microsoft themselves did just that with Microsoft Office, and have done for nearly 5 years! Now you too can liberate your program from the constraints of the common dialogs with 100% Delphi forms that look and act **just like the system ones, only better!** With extra functionality such as a resizable frame, tree view, and no three-character limit on file extensions, these components are useful in any application. And because they are Delphi forms, you can customize them directly or with visual form inheritance to add your own features like **file previewing**.

The powerful components contained in the Shell Control Pack will give your software product distinguishing features that make your application stand out from the crowd. Get the Shell Control Pack today!
