

self build

THINK BAGGERIDGE. NOT AVERAGE.

BAGGERIDGE
make brick work

Project: yourself.

Create a home that's as individual as you are with a little expert help from Baggeridge.

Self-build is all about self expression. It's about having the freedom to create your own unique home; a truly personal living space, which reflects your individual character and lifestyle perfectly.

The choice of cladding materials is key to the success of any self-build project. It is the most important element affecting the appearance and performance of your property.

Brick offers you the best of both worlds. It is beautiful and practical. It combines timeless visual appeal with a natural strength and durability no other cladding material can match.

And Baggeridge brings you the finest brick range there is.

Specially selected for the self-build market, our premium quality Rudgwick, Gilt and Sovereign stock bricks provide the inspiration for homes of real character and distinction.

The rich variety of colours and textures available offer a whole world of creative possibilities for those with a constructive imagination. And with a comprehensive range of pavers to complement your brickwork choice, Baggeridge suits your self-build requirements right down to the ground.

Offering free design advice and technical support, Baggeridge delivers the best bricks and the best back up to turn your dream home into a reality.

A3 size photocards of each brick type are available by calling 01902 880555 or emailing, self-build@baggeridge.co.uk

BAGGERIDGE

The Premium Choice

Think of the traditional appeal of brickwork - think of the variety of stock bricks from Baggeridge.

Three very distinctive types of stock brick in the Baggeridge range offer self-builders the potential to achieve the desired effect in any region and within any budget.

Baggeridge uses different processes to manufacture Rudgwick, Gilt and Sovereign stock bricks, resulting in different appearance characteristics which can be used to enhance any self-build design.

R RUDGWICK

For beauty and performance

Choose the genuine tradition from Baggeridge with the Rudgwick range. Rudgwick stocks are clamp fired and combine the outstanding beauty of naturally warm, deep colour with superb performance, offering high strength and FL-rated durability. An array of complementary special-shaped bricks, pavers and fireplace briquettes helps complete the picture of established perfection.

G GILT

Kiln-fired for perfection

Gilt stock bricks are sand-moulded and kiln-fired, achieving an attractive texture which complements their rich plain and multi colours.

S SOVEREIGN

Creative options

Sovereign stock bricks are water-struck and kiln-fired resulting in a smoother, more subtle texture than a sand-struck brick.

The wide variety of Baggeridge Sovereign stocks provides scope for numerous creative options on traditional themes.

The soft textures of these water-struck bricks are enhanced by the extensive colour range. The outstanding selection of colours includes shades of red, cream, orange, yellow and the unique blue which is perfect for achieving features without disrupting the continuity of brickwork texture.

B-BRICK®

Baggeridge are delighted to offer self-builders an exclusive and innovative brick concept which delivers real 'B'enefits!

The Baggeridge B-Brick is fashioned to offer a normal, uninterrupted brick face on one side whilst the opposite face is indented to give the impression of two separate half-bricks when mortared into place. It's two bricks in one.

It's a very practical example of modern technique and manufacture combining to facilitate traditional appearance and appeal. Self-builders once again have the opportunity to revisit and employ the charm and character of old bond designs such as 'English Bond' and 'Header Bond'. In recent years these wonderful, centuries-old styles have otherwise been made impractical by modern cavity wall requirements.

The B-Brick is a registered design and is available from Baggeridge in the Rudgwick Red Multi colour. Other types and colours will soon be available. Please ask for details.

QUALITY BY DESIGN

B-Brick is a UK and European Registered Trademark
No 2257214A & 2257214B

Special Shapes

7 ways to give your brickwork a 'special' finishing touch

Special-shaped bricks, including stock brick types, provide exceptional freedom of expression for achieving both functional features and ornamentation, contributing significantly to the visual effect and performance of the completed structure.

Baggeridge manufactures an outstanding selection of special-shaped bricks - including British Standard or purpose-made products - in colours and textures to complement the range of facing bricks.

With so many special bricks in our range, and the ability to craft designs to your specific requirements, Baggeridge can provide the bricks to complete your project no matter how unique.

Shown below is a selection of our most popular 'special' bricks:

-  Single Bullnose (left and right hand) BN.1
-  Double Bullnose BN.2
-  Squint (left and right hand) AN.1
-  Single Cant (left and right hand) AN.5
-  Double Cant AN.6
-  Plinth Stretcher PL.3
-  Plinth Header PL.2

Origins

Natural clay paving

The **Range** to bring reality to your dreams

Designed to complement individual style and taste perfectly, the **Origins** range of natural clay paving will help transform your house into a beautiful home. The extensive selection of colours, textures and options for gardens, patios and driveways allows exceptional scope to create the effect of your choice.

Attractive appearance and outstanding quality make **Origins** paving products the choice of professionals. They know that they can rely on the **Origins** range for lasting beauty and long-term performance:

- Fade free
- Strong and durable
- Frost resistant
- Resistant to oil and grease
- Easy to maintain
- Environmentally compatible

this page: Blue Vintage Brindled Paver

Below are some examples of designs inspired by the range of pavers. For more information or to discuss your specific project, please call Baggeridge Design Services Department on 01902 880555 or email, design@baggeridge.co.uk

Cobbles

The small scale of cobbles makes them ideal for achieving a traditional setting and allows attractive curved shapes or patterns to be created. Cobbles are available in a varied range of colours and sizes with either dragfaced or tumbled textures.

Vintage Pavers

Vintage Pavers from Baggeridge combine a unique visual appeal with the practical advantages of high quality strength and durability.

The pavers clearly reflect the character of 'period' style properties yet offer a touch of distinction and elegance that can enhance even the most modern homes.

Standard

Standard rectangular pavers have the familiar proportions of block paving, given new life in the **Origins** range through the superb choice of colours and textures. Standard pavers can be laid in a variety of interesting bond patterns such as basketweave, running bond and herringbone bond. Attractive effects can also be achieved by combining colours or integrating standard pavers with cobbles.

this page; above: Buff Multi Dragfaced Cobbles

Barn Pavers

Barn pavers, with their larger size, traditional stock texture and warm colours are the perfect companion to older dwellings or to add character to newer homes.

How many bricks will I need to build my house?

The answer to this question will obviously depend on the size of your home and the size of the bricks that you select. Baggeridge have designed a special calculator to help you to establish how many bricks you will need once you know the size of your home. This device can also be used to calculate how many specials or pavers you will need. It is available in the Baggeridge self-build pack and also on-line. Call 01902 880555 for your copy or visit www.baggeridge.co.uk

Why should I use bricks to build my house?

Clay bricks have been used for centuries for homebuilding. The natural properties of clay make them a good choice as they combine durability with a variety of aesthetic choices.

How can I ensure that my brickwork looks good?

Successful brickwork is the result of the combination of three key factors: good design, good materials and good workmanship. Although the standard of workmanship on site is the prime responsibility of the brickwork contractor, the self-builder can exert an influence by observation of work in progress and by ensuring adequate supervision is maintained.

From the moment that bricks are delivered onto site, care should be taken that they are handled and stored in such a way as to minimise damage.

Bricks should be off-loaded onto a level hardstanding. This avoids distortion of the pack which could otherwise lead to chipping. The hardstanding should be located as close as possible to the point of usage to minimise handling of the bricks which can result in unacceptable levels of damage.

Baggeridge Brick prime products are delivered to site in polythene-wrapped packs to reduce the risk of bricks becoming dirty before use. However, open packs should be covered with waterproof sheeting or tarpaulin to avoid the risk of unsightly staining problems which can occur if bricks become saturated.

One of the attractive features of natural materials such as clay bricks is the characteristic variation in shade that inevitably occurs. However, as the finished work should be free from unsightly colour banding or patching, it is important to ensure that bricks are well blended by the brickwork contractor.

Although colour blending is undertaken during the manufacturing process there is a need to mix the bricks on site, taking them from a minimum of three packs at one time. Packs should be broken down by taking bricks from a top corner and working diagonally towards the opposite bottom corner. Bricks should not be taken layer by layer, either horizontally or vertically.

Why should I use clay paving for my landscaping?

Clay paving is the ideal choice for a quality driveway or patio. Appearance is key but, all too often, the original characteristics of many products deteriorate and quickly become a disappointment. Clay paving not only endures but even improves with age. They are made to perform so withstand the rigours of everyday garden activities. Their appearance will not fade or diminish over time.

What is the difference between FL and ML designated bricks?

These letters stand for Frost Resistant with Low soluble salts (FL) and Moderately Frost resistant with Low soluble salts (ML). In some situations only bricks which are classified as FL are suitable – using any other classification could mean problems in the future. Baggeridge supply a simple leaflet – Choosing the Right Brick – which is included in our self-build pack. Alternatively call 01902 880555 for your copy.

If you have any other technical or design questions further information is available on our websites, www.baggeridge.co.uk, www.origins-pavers.co.uk or www.archifacts.co.uk. Alternatively you can contact our Design Services Department on 01902 880555, or e-mail: self-build@baggeridge.co.uk

BAGGERIDGE

Case Study

106 Churchside is a four-bedroomed, detached property designed by London based architects Heber-Percy & Parker for Mr & Mrs Rose.

The property is based in a conservation area and 'Sea Sand Multi Rudgwick Stock ATR' bricks were chosen in keeping with adjoining properties. A key feature of the house is its windows by stained-glass artist Alan Spark from Bradford-on-Avon which complement the warm colour of the bricks.

Initially there was considerable public opposition to the demolition of an existing bungalow, therefore the design proposals centred on the enhancement of the site through the new house. A single-storey, pitched-roof construction accommodates a breakfast room, utility room and garage, keeping this part of the building to low level in line with the requirements of the planning officers. The remainder of the house is two-storeys.

The house features brick arches from Baggeridge chosen in colours to contrast with the main body of brickwork. In addition, carved brickwork details the client's, architect's and contractor's names with the year of inception.

TECHNICAL OVERVIEW

Every effort has been made to reproduce accurately the brick colours and textures within the limitations of the printing process; however, variations may occur and it is therefore strongly recommended that samples are obtained prior to specification.

As with other natural materials, a degree of shade variation is normal between different batches of bricks. Although colour blending takes place during the manufacturing process, bricks should be mixed on site in line with standard working practice, taking them from a minimum of three packs. Special requirements for closer colour tolerances within packs of bricks as supplied should be discussed with the Design Services Department.

Baggeridge facing bricks, engineering bricks and pavers are produced to meet the specifications contained in the current British Standards. Data given in this catalogue relates to current standards, but all information will be subject to review with the introduction of European standards.
