

Exercise: 1

Instructions: There are 168 butterfly species known to live in Idaho. You can use the visual key to identify the species listed below. To use the key, compare your butterfly with each of the choices given in the key. At each page choose the option that matches your species. Pay close attention to detail. If you are careful, it should lead you to its page where you can learn its name and get to know how it lives in nature.
