

NFSManager

Exported Directories window

SA4padPointRule2.eps ↵

Use this window to add or remove exported directories and grant access to other computers.

You choose Export From in the NFSManager and then choose a NetInfo domain to open this window.

295009_paste.eps ↵

stepArrow.tiff ↵ List the directories you want to export in the top half of the window.

This directory list box shows all
directories you're currently exporting
from the domain you've selected.

Drag an icon from the FileManager window to the icon well in the upper right corner to add a directory to the directory list.
Or click Add to select a directory from a browser.

Select a directory and click Remove if you don't want to export it.

346104_paste.tiff ↵

106845_PointDashedRule3Black.eps ↵

435613_stepArrow.tiff ↵ Use the bottom half of the window to control access to a selected directory.

Select a directory, type a host name
below the appropriate list, and click Add.

Or select a host name from one
of the lists and click Remove.

384587_paste.tiff ↵

Choose one of these options for all
network computers you don't list in the window.

paste.tiff ↵

Check here if you want to allow
unknown users to log in on the network.

Use the default nobody account for unknown users,
or choose User with uid and type a new id number.
