NetInfoManager

Add Existing Domain as Child panel

SA4padPointRule2.eps ¬

Use this panel to turn an existing domain into a child domain of a specified parent domain. You must specify the parent domain, the master host name of the child domain, the master tag of the child domain, and the domain name of the child.

This panel appears when you choose the ªAdd an existing child domain to the domain heirarchyº option in the Manager the Domain Hierarchy panel.
