

(unsigned int)count

Returns the number of records in the receiver.

readRecord:(unsigned int)aHandle fromZone:(NXZone *)zone

Reads and returns the record identified by aHandle. The record is allocated from zone its class is instantiated if necessary. Returns nil if the record doesn't exist or can't be read.

If the record conforms to the IXRecordTranscription protocol, the implementor of this message sends source: didReadRecord: and finishReading to the instantiated record.
