

The Window Buttons

paste.tiff ↵

The window buttons allow you to select the BackSpace animation display. Selecting "Normal" will place the current screen saver in a normal window, allowing you to preview its display. If you select "Background", the current module will be placed behind all other windows. Sometimes it's kind of fun to have your computer zoom through space while you work... If you want the program to stay out of your way, just select "None".
