

# Box

A Box is a view that visually groups other Views. As a graphic object, a Box's purpose is to group its contents, typically by displaying a border and a categorizing title. You control the border type and the title position, as well as the text and font of the title. Groupings are often used within panels to organize the display of similar items. One common use of the Box object is to title and border a pop-up list, such as the Resolution and Paper Feed pop-up lists on the Print Panel.
