

hideCursor:

moveCursor:frame:token:  
showCursor:frame:token:

Get the device port devicePort

Set screen brightness setBrightness:token:

(port\_t)devicePort

Returns the device port, which should be obtained from this instance's IODeviceDescription.

hideCursor:(int)token

Removes the cursor from the screen.

moveCursor:(Point \*)cursorLoc  
frame:(int)frame  
token:(int)token

Removes the cursor from the screen, moves it, and displays the cursor in its new position.

setBrightness:(int)level token:(int)token

Sets the brightness of the screen. Many devices (and thus many drivers) don't permit this operation.

setBrightness:token: (IOFramebufferDisplay class)

showCursor:(Point \*)cursorLocation  
frame:(int)frame  
token:(int)token

Displays the cursor at cursorLocation.
