

## 3.3 Release Notes: Emacs and vi

This file contains information about the Emacs and vi text editors. There are no specific notes for Release 3.3.

### **Bugs Fixed in Release 3.2**

Reference: 33176

Problem: Emacs and vi didn't work in console mode on Intel platforms.

Description: When you used the console on an Intel-architecture machine (by typing `^console^` at the login window), you couldn't use emacs or vi to edit files. This has been corrected.
