# Programming Note:
# Novell® NetWare®

This documentation is reproduced exactly from Novell's NetWare documentation, which assumes a different header file directory structure from that used by NEXTSTEP.   Any reference in the NetWare documentation of the form:

    **#include "***filename***.h"**

should be replaced in your code with:

**#include <netware/***filename***.h>**

The NetWare library to link your applications against is **libnw_s.a**.
