3.3 Release Notes:
Emacs and vi

This file contains information about the Emacs and vi text editors.   There are no specific notes for Release 3.3.

Bugs Fixed in Release 3.2

Reference: 33176

Problem: Emacs and vi didn't work in console mode on Intel platforms.

Description: When you used the console on an Intel-architecture machine (by typing ªconsoleº at the login window), you couldn't use emacs or vi to edit files.   This has been corrected.
