

## NSEPSImageRep

**Inherits From:** NSImageRep : NSObject

**Declared In:** appkit/NSEPSImageRep.h

### Initializing a New Instance

- + (id)**imageRepWithData:**(NSData \*)*epsData*
- (id)**initWithData:**(NSData \*)*epsData*

Invokes **initWithData:** to return an instance with data from *epsData*.  
Initialize an instance with data from *epsData*.

### Getting Image Data

- (NSRect)**boundingBox**
- (NSData \*)**EPSRepresentation**

Returns the rectangle that bounds the image.  
Returns the EPS representation of the image.

### Drawing the Image

- (void)**prepareGState**

Implemented by subclasses to initialize the graphics state before the image is drawn.
