# NSIgnoreMisspelledWords

**Adopted By:**          NSText

**Declared In:**          appkit/NSSpellProtocol.h

## Identifying the Source

- (void)**ignoreSpelling:**(id)*sender*

Implement to allow an application to ignore misspelled words on a document-by-document basis.   This message is sent by the NSSpellChecker instance to the object whose text is being checked.   To inform the NSSpellChecker that a particular spelling should be ignored, the receiver asks the NSSpellChecker for the string value of its selected cell.   It then sends the NSSpellChecker an **ignoreWord:inSpellDocumentWithTag:** message.
