## **TMSImg.tiff ↗ Introduction to OneVision-Image**

You can activate the OneVision-Image module by clicking on the above icon in OneVision's module bar. This displays the tool bar, containing OneVision-Image's tools.

Like all OneVision modules, OneVision-Image works with elements. You can have as many graphic elements in a document as you like. They can even be of different formats.

OneVision-Image offers a large number of functions not found in other software. Naturally, a lot of experience and training is necessary to use all of these functions efficiently. But because all parts of OneVision are similarly structured, if you're familiar with any module, it will be easy to learn others.
