## **TextRahmenTool.tiff ↗ Text Frame Parameters**

This panel contains all the controls for handling text elements. You can specify how text will flow and how text will surround other elements. Text frame piping, alignment, and column structures are also controlled in this panel.

Note: The parameters in this panel affect only complete text elements, not single characters. Single characters are controlled in the *Character Attributes* (;OVSelCharTool.rtf;;↗) panel.

Specific portions of the panel are described in detail in the following chapters.
