Numbers

## Page Numbers

You should be familiar with the functions of the Page Director  
(;Pagedirektor.rtf;↵) before reading this section.

paste.tiff ↵

*Figure: The page number field*

In the lower-right corner of every page, you can find page numbering information and controls for moving back and forth through the document.

If there are several pages in a OneVision document, you can turn pages forward and backward by using the arrow buttons on the left and the right of the number field. The area between these two buttons contains the current page number and the number of pages in the document. To move to a particular page, click on the page number field and the following panel will appear:

935044\_paste.tiff ↵

*Figure: The Goto Page panel*

The radio buttons let you choose whether you want to go to a particular masterpage or documentpage.

In the *<Goto Page>* entry field you can enter the page number you want to be displayed. You have to press the *Return* key or to click the *<OK>* button to go to the entered page.

The *<First Page>* and *<Last Page>* commands enable you to go directly to either the first or the last page.

The numbering of pages is controlled by the *<Numbering>* (*;/../MainMenu/Page/Numbering.rtf**;**↵*) command in the *<Page>* submenu of the main menu.
