Colors from OneVision Lists

paste.tiff ↪ **Colors from OneVision Lists**

Clicking this icon in the color selection panel enables you to select colors from OneVision lists.

OneVision manages its own color lists, which are saved as a part of the documents in which they are used. If you use colors from a NEXTSTEP list in a document, however, these colors are only saved on your computer or network; they do not become a part of the documents in which they are used. If such a document is sent to another computer, a copy of the color list must accompany it.

Another advantage of OneVision lists is that you can change a color wherever it occurs in a document simply by changing it in the list.

## **Adding Colors**

You can add as many own colors to a list as you like, using the following procedure:

1. Define a color by using one of the color models available. You

can see the color in the color well in the upper part of the color selection panel.

2. Click the icon for OneVision lists.
3. Click in the color well and drag the color into the OneVision list area. A new entry will be displayed in the list, consisting of a default name with the swatch color alongside it.
4. Double-click the name with the left mouse button to select it, and type in a new name.

## Changing Colors

You can change the name and definition of a color at any time. To change an existing color definition:

1. Define a new color by using one of the color models available and store it in a swatch.
2. Click the icon for the OneVision list and select the color you want to change in the list. (the color well will display the new color you have just created).
3. Take the new color from the swatch and drag it into the OneVision list area.
4. An attention panel will ask you whether to create a new color entry or whether to modify the current one.

Note: All the elements in your document using a color you are modifying will immediately adopt the new color.

## Removing Colors

For removing colors from the OneVision list, take the following steps:

1. Select the entry of the color you want to remove from the list.
2. Press the *Backspace* key or click <Delete> from the Edit menu.
3. Confirm your action in the attention panel that appears.

Note: Removing a color from the OneVision list does not remove it from the elements in the document to which it has already been applied. These elements will keep their color, but that color will no longer be available from the color list.

OneVision lists are always available for the document they belong to; if you load a document, its OneVision lists will be loaded, too. Closing a document also closes its color list.

The color entries in OneVision lists are sorted alphabetically.
