

Questions and Answers to OneVision

Question: OneVision documents that contain CMYK images aren't displayed correctly. How can this be amended?

Answer: For a correct display of CMYK colors under NEXTSTEP, you should execute one of the following commands in a terminal window. (Terminal windows can be opened with the application Terminal.app.):

```
dwriteln OneVision NXCMYKAdjust YES  (affects OneVision documents only)
dwriteln GLOBAL NXCMYKAdjust YES  (affects the display in all applications)
```

Double-clicking this command shell icon activates the correct CMYK color display for all applications:

CMYK on ↵

Alternatively, you can use the application CMYKAdjust for fine-tuning the CMYK color display. In the preferences of CMYKAdjust you can specify for which applications you want the corrected display of CMYK colors to be used.
