

## Installing SCREENAdjust *BETA*

For installing this application you must be logged in as the user <sup>a</sup>root°. Double-clicking the SCREENAdjust.pkg icon starts the installation. A panel will be opened in which you can specify the folder where you want the SCREENAdjust files to be copied. The default folder is the *Apps* directory. How to use the installer application is described in the NEXTSTEP documentation.

Because of hardware dependencies, SCREENAdjust can only be used on computers with **Intel architectures in combination with suitable calibration hardware** (e.g. miro CALIBRATION or miro.PROOF).

SCREENAdjust can be started immediately after you have installed the package. However, we recommend that you install the application in your personal dock and set the preferences of your workspace to automatically launch it at each start of your computer.

Please note:

If you haven't licensed SCREENAdjust, no calibration parameters will be save and therefore will be lost at logout. You can receive a license via E-Mail or Fax from the address below.

More help is supplied in the online help of the application itself.

If you have any questions about licensing or other products of OneVision GmbH, please ask your dealer or contact OneVision GmbH directly.
