Diaquest's DQ-TimeCoder* plug-in for Adobe Premiere is now available for the PC.

DQ-TimeCoder provides for frame accurate capture of video clips from within Premiere as well as SMPTE/EBU time code stamping of Adobe Premiere files. DQ-TimeCoder also provides complete real time machine control for professional video machines as well as the ability to log video segments by time code location and to automatically batch capture lists of video clips.

With DQ-TimeCoder installed, Adobe Premiere's Movie Capture window is transformed to include machine control buttons, current time code location, as well as the ability to mark-in and mark-out timecode locations for the video segments to be captured.

DQ-TimeCoder consists of software plus a cable which connects the PC's serial (com) port with the RS-422 port on the videotape machine. DQ-TimeCoder both controls the machine as well as reads time code through the serial port connection.

For more information on DQ-TimeCoder, please contact Diaquest at (510) 526-7167 (phone) or (510) 526-7073 (fax).
