

Class `java.net.UnknownHostException`

```
java.lang.Object
|
+----java.lang.Throwable
      |
      +----java.lang.Exception
            |
            +----java.io.IOException
                  |
                  +----java.net.UnknownHostException
```

```
public class UnknownHostException
extends IOException
```

Signals that the address of the server specified by a network client could not be resolved.

Version:

1.5,08/16/95

Author:

Jonathan Payne

Constructor Index

- o [**UnknownHostException**\(String\)](#)
Constructs a new `UnknownHostException` with the specified detail message.
- o [**UnknownHostException**\(\)](#)
Constructs a new `UnknownHostException` with no detail message.

Constructors

o **UnknownHostException**

```
public UnknownHostException(String host)
```

Constructs a new `UnknownHostException` with the specified detail message. A detail message is a `String` that gives a specific description of this error.

Parameters:

host – the detail message

o **UnknownHostException**

```
public UnknownHostException()
```

Constructs a new `UnknownHostException` with no detail message. A detail message is a `String` that gives a specific description of this error.
