

# Interface java.util.Observer

public interface **Observer**  
extends [Object](#)

When implemented, this interface allows all classes to be observable by instances of class Observer.

**Version:**

1.7 07/28/95

**Author:**

Chris Warth

---

## Method Index

o **[update](#)**([Observable](#), [Object](#))

This is called if observers in the observable list need to be updated.

## Methods

o **update**

```
public abstract void update(Observable o,  
                           Object arg)
```

This is called if observers in the observable list need to be updated.

**Parameters:**

o – the list of observers

arg – the argument being notified
