Class java.lang.Win32Process

```
java.lang.Object
   |
   +----java.lang.Process
            |
            +----java.lang.Win32Process
```
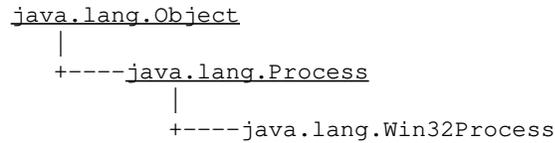

---

public class **Win32Process**
extends Process

Constructor Index

o **Win32Process**(String[])

Method Index

o **destroy**()
    Kills the subprocess.
o **exitValue**()
    Returns the exit value for the subprocess.
o **finalize**()
o **getErrorStream**()
    Returns the an InputStream connected to the error stream of the child process.
o **getInputStream**()
    Returns a Stream connected to the output of the child process.
o **getOutputStream**()
    Returns a Stream connected to the input of the child process.
o **waitFor**()
    Waits for the subprocess to complete.

Constructors

o **Win32Process**

```
public Win32Process(String cmd[]) throws Exception
```

Methods

o **getOutputStream**

    public OutputStream getOutputStream()

> Returns a Stream connected to the input of the child process.
> **Overrides:**
>> getOutputStream in class Process

o **getInputStream**

    public InputStream getInputStream()

> Returns a Stream connected to the output of the child process.
> **Overrides:**
>> getInputStream in class Process

o **getErrorStream**

    public InputStream getErrorStream()

> Returns the an InputStream connected to the error stream of the child process.
> **Overrides:**
>> getErrorStream in class Process

o **finalize**

    public void finalize()

o **exitValue**

    public int exitValue()

> Returns the exit value for the subprocess.
> **Overrides:**
>> exitValue in class Process

o **waitFor**

    public int waitFor()

> Waits for the subprocess to complete.
> **Overrides:**
>> waitFor in class Process

o **destroy**

    public void destroy()

Kills the subprocess.

Overrides:
      destroy in class Process
