Combo Links

Overview
Allows you to create a combo box (drop down box) and fill it with links that the user can click on to go to a specific URL.

Browser Compatibility
• Works fully in Netscape Navigator 2.01and higher
• Works fully in Microsoft Internet Explorer 3.0 and higher
• No errors should occur in old browsers but the corresponding button might
   appear as a text box
• Old browsers will also display a URL not found dialogue box when hyperlink
   is clicked

Troubleshooting
• Make sure the URL's for each link in the combo box are correct. Type them
   in just like you would in a regular HTML editor. The URL's may be relative
 ("links/test.htm") or absolute ("http://www.test.com/links/goto.htm").
• Make sure your document has a head tag (<head>....</head>) or else Java
   Script It! will not be able to insert the java script code.
