

# Fade In and Fade Out

## Overview

Allows you to cause a web page to fade in and/or fade out using custom colors and custom speeds.

## Browser Compatibility

- Works fully in Netscape Navigator 3.0 and higher
- Works fully in Microsoft Internet Explorer 3.0 and higher
- No errors should occur in browsers that do not understand the code

## Troubleshooting

- Do not apply the Fade In and Fade Out code to a page more than once (unless code was removed through Revert). This means that you should not apply a fade in and then at a later date apply a fade out to a page.
- Text might not show up correctly on an inverted fade in Netscape Navigator 3.xx.
- Make sure your document has a head tag (<head>....</head>) or else Java Script It! will not be able to insert the java script code.
