# Working Buttons

## Overview
Places a button in the document that when clicked will load another URL into the browser. The buttons are form buttons (the kind that appear in windows dialogue boxes) and appear to move up and down when clicked.

## Browser Compatibility
• Works fully in Netscape Navigator 2.01 and higher
• Works fully in Microsoft Internet Explorer 3.0 and higher
• Buttons may appear as text boxes in old borwsers

## Troubleshooting
• Make sure the URL for each button is correct. Type them in just like you would in a regular HTML editor. The URL's may be relative ("links/test.htm") or absolute ("http://www.test.com/links/goto.htm").
• Do not use a quote (the character ") in the button caption because it will cause an error in the browser.
